1. Overall Solution Proposal

1.1 Solution Architectural Overview

The team will be proposing a Data Engineering Solution to... and the following is the overall software architecture design.

1.2 Project Plan and task

Over the course of the Capstone Delivery, team members will be assigned with different tasks to tackle as a group and individual effort. The following states the expected project timeline and tasks to be completed by the respective members of the team:

1.3 Methodology

State the methodology/approach will be taken on the lifecycle of the data. (E.g. Medallion architecture in folder naming/data naming/transformation)

2. Data Source

2.1 Datasets Info

To achieve the envisioned solution, the following data will be extracted with the following details:

- Data Source
- Data Size, No of records
- Data Type, Data Fields
- Change Data Capture fields

2.2 Security Design

The following section talks on the security access design / data masking
